Type and Screen Specimen Labeling Procedure

**** This entire process should be performed at the bedside****

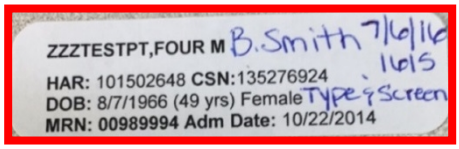

1. Verify the patient's identity according to organizational policy, Patient Identification, RI10. The patient shall be asked to verbally verify his/her identity, whenever possible, at the time of specimen collection.

2. Collect your pre-transfusion specimen.

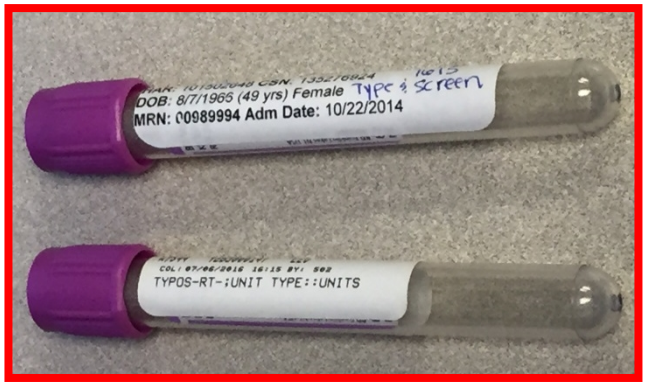

3. Obtain the specimen label from Collection Manager (CLM) according to organizational policy, Laboratory Specimen Labeling, TX06.

4. If unable to use the CLM system (scanner broken, downtime, etc.) then label the specimen with the patient's *chart label. Laboratory Specimen Labeling, TX06.

All labels MUST include the following:

- Date & time of specimen collection
- First initial & full last name of specimen collector
- Patient's first name & last name
- Patient's medical record number and/or DOB
- Name of test ordered: "Type & Screen" or "T&S"

5. Affix the CLM or *chart label to the specimen, according to organizational policy, Laboratory Specimen Labeling, TX06.

Request for 2nd Specimen: The CLM system must be used whenever possible. If not utilized and there is no previous history of an ABO/Rh type in the patient history file in the Transfusion Service, a second specimen for a confirmatory ABO/Rh type must be collected and testing performed prior to distribution of product. **The Transfusion Service staff will monitor this and place an order in OneChart and contact the appropriate staff member if additional specimen collection is required.** The second specimen MUST be collected at a separate time (and by a different staff member, if possible) from the first specimen collection. (Uncrossmatched, emergency released product will be available if time does not permit collection and/or testing of second specimen.)

Specimen Expiration: Type and Screen specimens expire at 0600 on the morning of the third day after specimen collection, with date of collection as day zero. (a patient with a T&S collected on 7/1 will require a new T&S on 7/4 after 0600).

*Departments that do not utilize CLM may still submit specimens with the old LIS labels, but will be subject to possible 2nd specimen verification as with the chart labels.
